

DIGIAIR

The Next Generation Wireless Digital Communicator

DualCom DigiAir utilises all mobile networks, via our WorldSIM, to signal an alarm from a protected premises to the Alarm Receiving Centre (ARC).

Designed for low to medium risk premises, it is an ideal upgrade for wired digital communicators, as it eliminates call costs and phone charges.

Unlike older digital communicators, DigiAir does not rely on copper to send a signal, so it is unaffected by Next Generation Networks (NGNs). This is the telephone network upgrade from copper to fibre, which accommodates higher speed broadband services.

DigiAir is small enough to fit into any existing control panels. It can be supplied complete with a Compact Power Supply to provide a more aesthetically pleasing finish.

- Conforms to EN Grade 2
- WorldSIM as standard to increase reliability and reduce false alarms
- Small enough to fit into any existing panel
- Dial Capture provided as standard
- Fast Format, Contact ID and extended SIA
- Patented Technology - GB2465833
- Can be pre-fitted to a Compact Power Supply if required
